

Nexans strengthens its long-standing partnership with Eiffage for the energy transition and the electrification of the future.

PRESS RELEASE

Paris, July 6, 2022 – Nexans, a key player in electrification and the energy transition, has signed a three-year partnership agreement with Eiffage. The Group has been approved to supply charging stations for electric vehicles at Eiffage’s 1,000 French sites, representing more than 4,000 charging points.

After 20 years of successful collaboration, Eiffage renews its trust in Nexans for the supply of charging stations.

Nexans’ AGICITY range, produced at its Donchery site in the Ardennes region of France, offers compact charging stations that can be customized for indoor and outdoor car parks, including numerous services and options for integrating high-performance digital solutions.

The AC and DC charging stations supplied by Nexans operate at between 22-50 kVA, allowing two cars to charge at the same time. A 45-minute charge gives up to 80% of the electric range, depending on the vehicles and the power of the station.

An initial project overseen by Nexans to equip the Eiffage head office in Vélizy Villacoublay with 200 charging points was successfully completed in 2021.

With these developments, Nexans is once again displaying its industrial agility and its capacity to support its customers in their energy transition.

Jean-Louis Tisnes, France Sales Director for the EVCI activity of Nexans¹, commented: *“We are very proud of the trust that Eiffage places in Nexans. This partnership enhances our collaboration even further, offering exciting development prospects in the rapidly expanding EVCI market. It also demonstrates the commitment of our two groups to the energy transition.”*

Patrick Harter, Purchasing Director at Eiffage, added: *“Nexans’ expertise, the quality and reliability of its French-manufactured products, and the quality of the long-term collaborative relationship were decisive factors in our decision to confirm Nexans as a supplier to equip our 1,000 sites with electric vehicle charging stations.”*

Since 2014, Nexans has been designing and manufacturing electric vehicle charging stations that integrate management and supervision services. It has already delivered more than 20,000 charging points in France, supporting the collective effort to reduce CO₂ emissions.

¹ Electric Vehicle Charging Infrastructure

Nexans hence confirms its broader goal of creating the electricity of tomorrow and being a player in the construction of a low-carbon Europe.

This ambition follows on from actions already undertaken with Eiffage, in particular in the development of solar energy – an area that has seen continual growth since the inauguration of the Cestas photovoltaic power plant in 2015, the largest in Europe at the time (300 MWc of installed power producing the equivalent annual consumption of 150,000 households).

Given that 40% of global energy-related CO₂ emissions come from the electricity sector, primary energy sources must move towards renewable energy. Solar power, for example, currently accounts for around 2% of the French energy mix. However, this sector is expected to see exponential growth, and is now a priority investment for the planet.

Nexans is also working to bolster the competitiveness, reliability and sustainability of solar power – one of the key solutions for the electrification of the future, as well as the use of electric vehicles.

About Nexans

For over a century, Nexans has played a crucial role in the electrification of the planet and is committed to electrify the future. With around 25,000 people in 42 countries, the Group is leading the charge to the new world of electrification: safe, sustainable, renewable, decarbonized and accessible to everyone. In 2021, Nexans generated 6.1 billion euros in standard sales. The Group is a leader in the design and manufacturing of cable systems and services across five main business areas: Energy Generation & Transmission, Distribution, Usages, Industry & Solutions and Telecom & Data. Nexans is the first company of its industry to create a Foundation supporting sustainable initiatives bringing access to energy to disadvantaged communities worldwide. The Group pledged to contribute to carbon neutrality by 2030.

Nexans. Electrify the future.

Nexans is listed on Euronext Paris, compartment A.
